Before this study, had you/had your child previously taken an antigen swab test to see if you/they had COVID-19?

An antigen test indicates whether you currently have the COVID-19 virus. This could be either a PCR swab test of the nose and throat where the test goes to a laboratory, or a lateral flow swab test (of your nose only, or of nose and throat) where you get the results in less than an hour, without the test going to a laboratory.

Please do not include any antibody tests that show if you/they have had COVID-19 in the past. Just include tests that show if they have the virus at the time of the test.

Please select all that apply.
