Weather systems to boreholes: the challenges of representing groundwater impacts in the changing water cycle

BGS: Bricker, Jackson, *Hughes* and Peach
27th June 2012

Order

- (brief) Re-cap of what we want to do
- Summary of groundwater issues
- Challenges
- Possible solutions

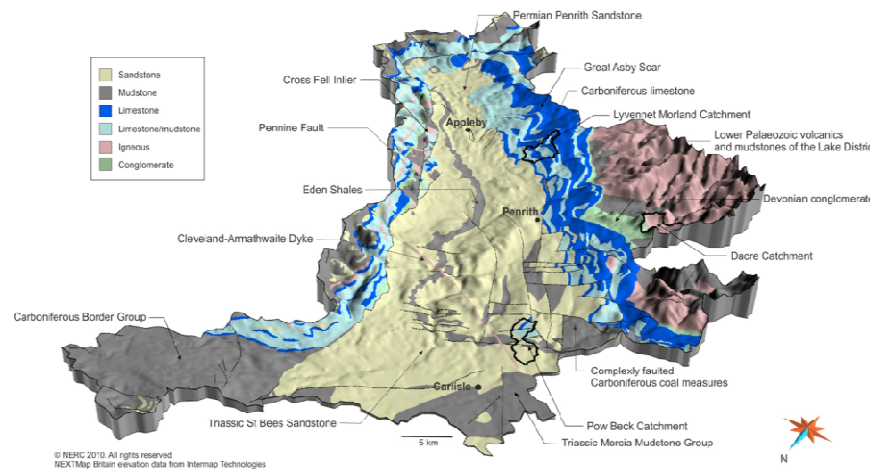

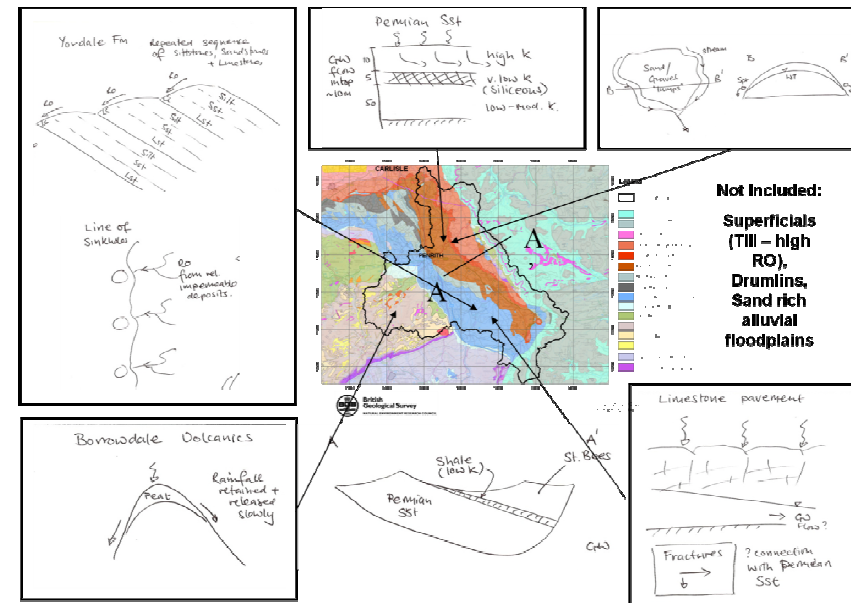

Order

- ***(brief) Re-cap of what we want to do***

HydEF – Eden Valley

- Geological understanding: Catchment scale, Lazonby Gorge and granulation seams
- Hydrogeological understanding – DTC
- Project-based: conceptualisation

Superficial deposits within the Eden Catchment

Legend

-  Eden Catchment
-  Alluvium
-  Glacial Sand and Gravel
-  Peat
-  Raised marine deposits (Sand and gravel)
-  River Terrace Deposits (Sand and gravel)
-  Till
-  Unknown

Geological materials © Nerc. All rights reserved.
 Topography © Crown Copyright reserved.

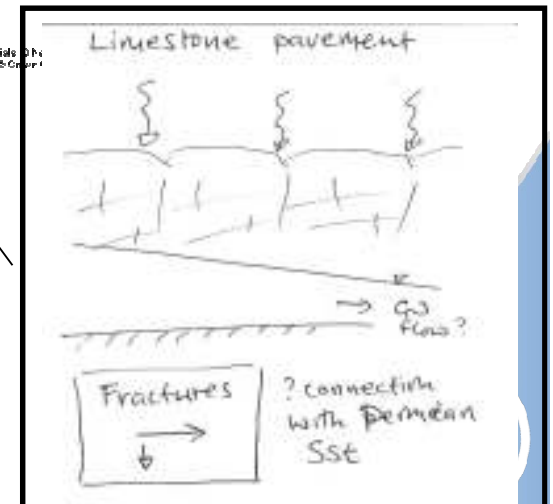

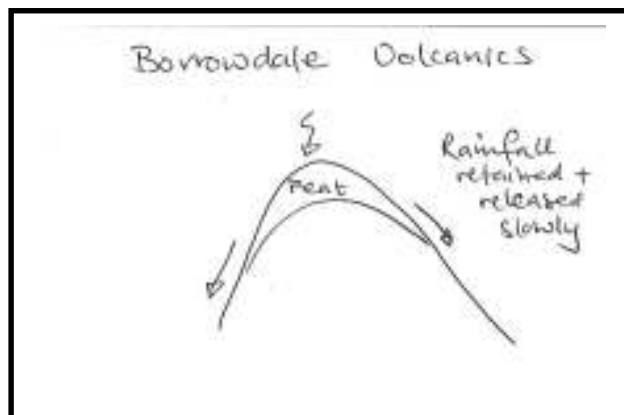

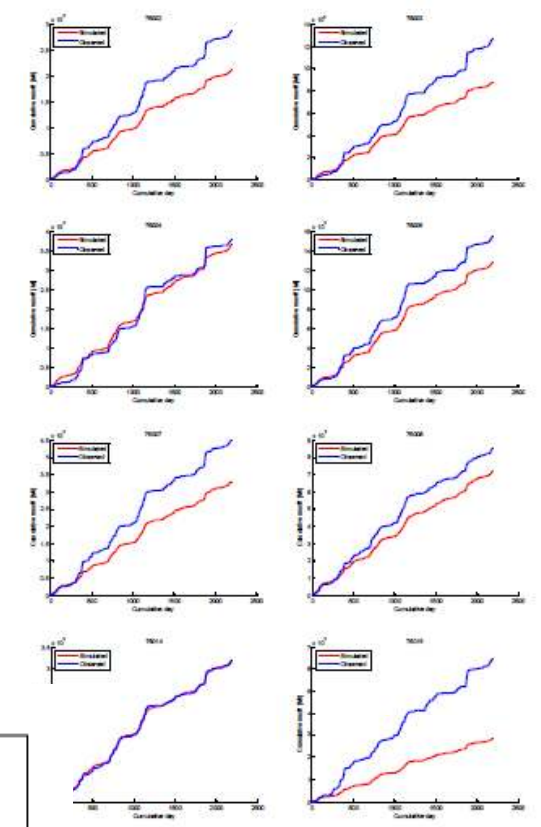

- Legend
- Fluvial Channel
 - Yoredale Group
 - Tigris Formation
 - Snowdon Sandstone Gp
 - Cumbrian Limestone
 - Pennine Sandstone
 - Millstone L.
 - Coal Measures
 - Carboniferous Limestone
 - Basement Beds
 - Seabrook Gp
 - Borrowdale Volcanic Gp
 - Pennine Formation
 - Windermere Supergroup

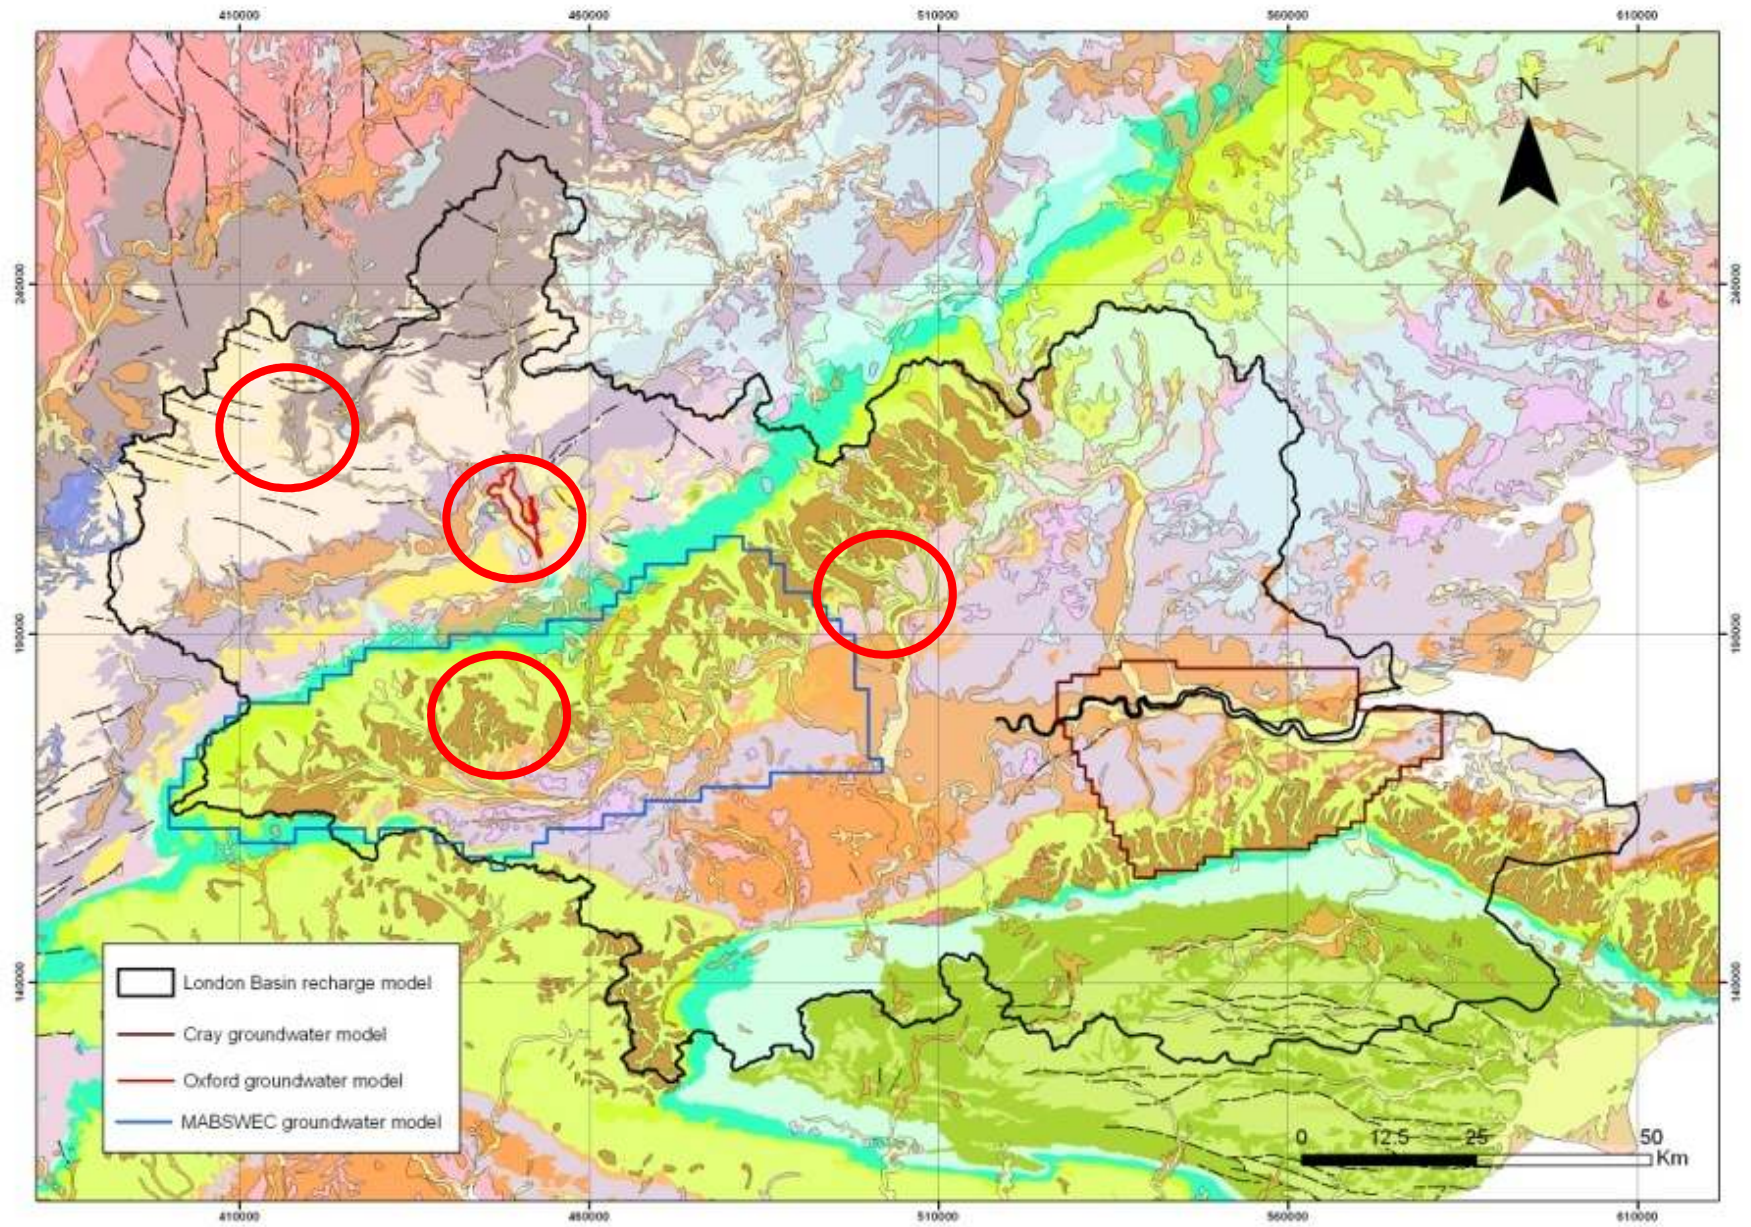

Not included:
Superficials
(Till – high RO),
Drumlines,
Sand rich alluvial floodplains

HydEF – Oxford

- Model composition under development
- BGS now has RS Infoworks licence for 1 years and model files
- Linked model only north of Botley Road
- Issue over representation of flood plain storage

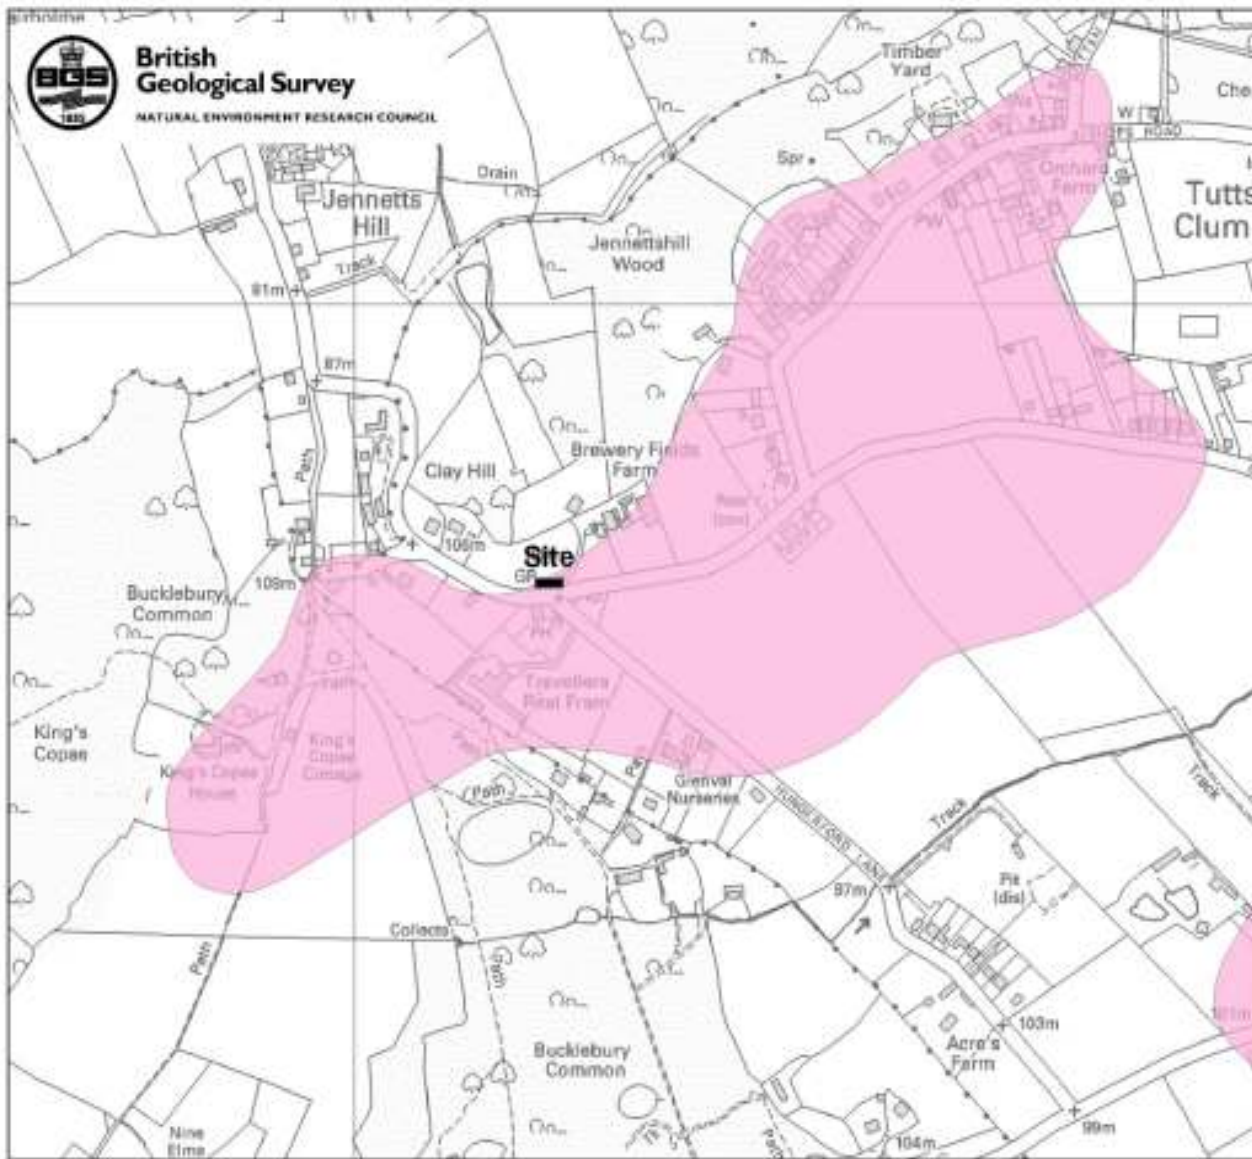

HyDEF – Understanding the hydrogeology

Pang - Lambourn

Drilling project (BGS funded)

- To assess the contribution of the Palaeogene deposits to the Blue Pool
- Two boreholes side by side (one chalk, one Palaeogene)

Surface completion:

The surface completion shall comprise the uppermost piece of surface casing used to support the completed borehole and to provide protection for the piezometer. The casing shall be left protruding between 0.5 m and 1 m above ground surface and shall be completed by a lockable cap or flange on top. The piezometer shall be completed above ground but below the top cap or flange. The casing shall be cemented into the ground to avoid the possible ingress of surface water to the borehole.

HydEF – Cotswolds groundwater modelling

- Developing semi-distributed model of aquifer system.
- Will be incorporated into multi-aquifer model of Thames catchment.
- OpenMI compliant code almost complete.

Order

- (brief) Re-cap of what we want to do
- ***Summary of groundwater issues***
- Challenges
- Possible solutions

River reach

Springs

Boreholes

Adits

Note alluvium, sands and gravel, and river terrace deposits

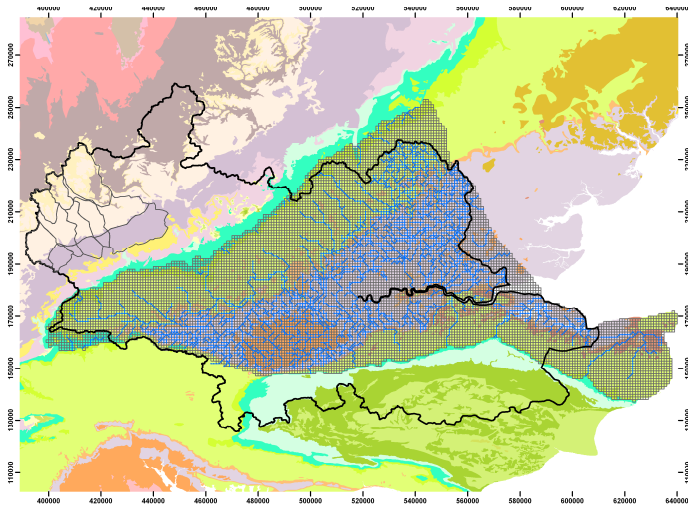

Order

- (brief) Re-cap of what we want to do

- Possible solutions

Spatial scales

Basin Scale

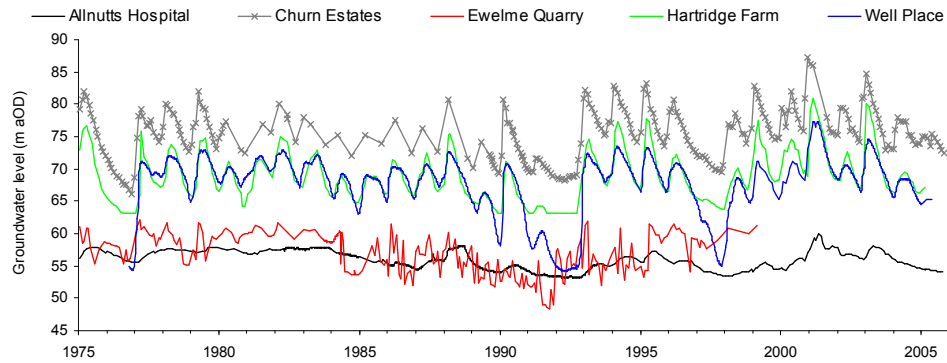

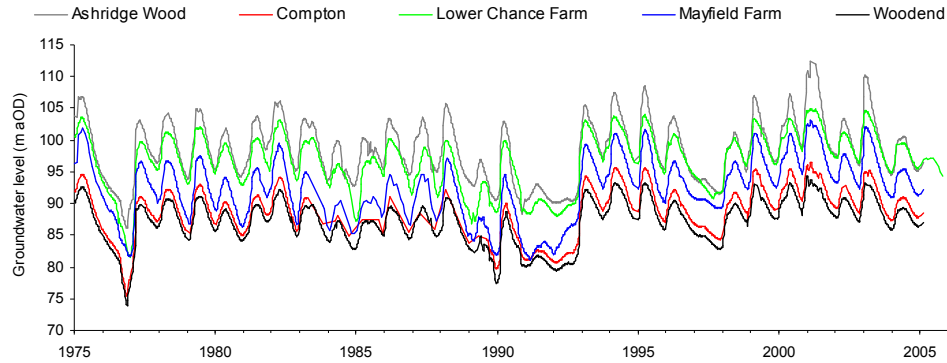

Regional Scale

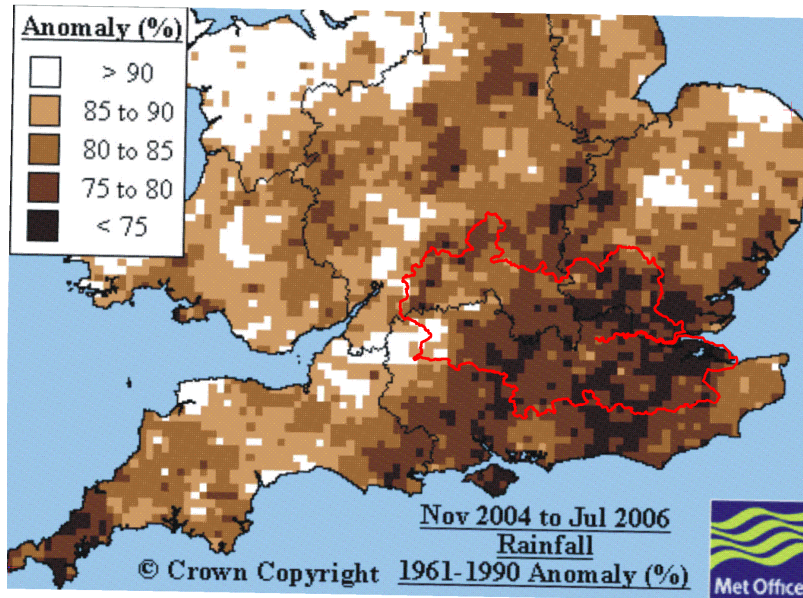

Local Scale

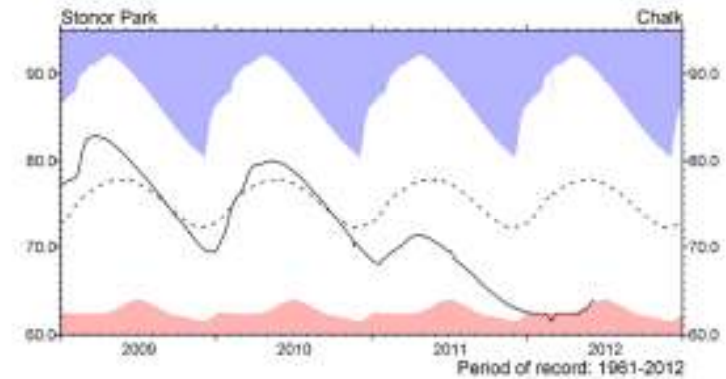

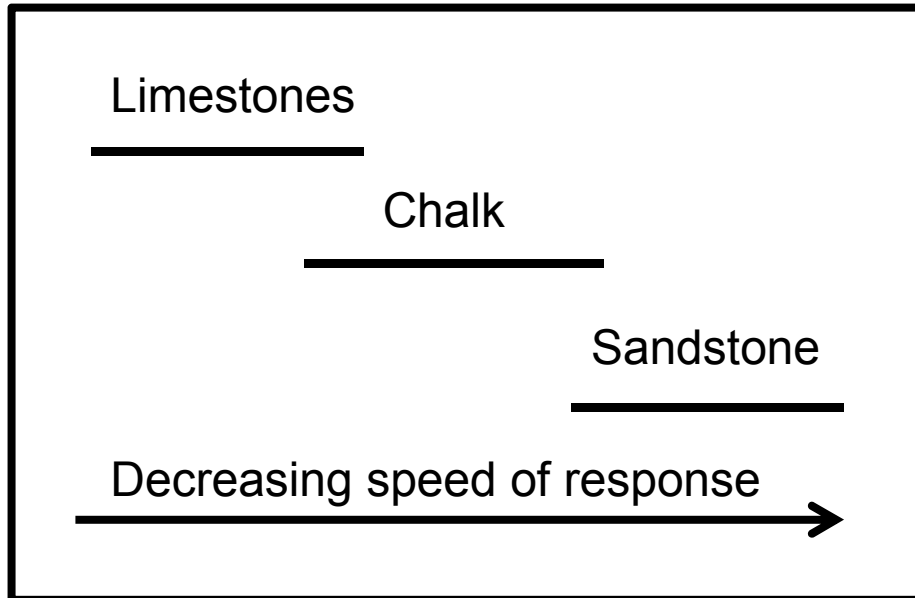

Temporal scales

Droughts – spatial and temporal

Response times

Order

- (brief) Re-cap of what we want to do
- Summary of groundwater issues
- Challenges
- ***Possible solutions***

What next?

- Improved conceptualisations where it matters, i.e. around Blue Pool
- Improved understanding of catchment scale changes due to extremes, i.e. impact of droughts on Cotswolds
- Water balances at a catchment scale and the importance of understanding smaller scale processes, i.e. recharge in the Eden
- Representation of boreholes within regional models: ZOOMing grids and embedded models
